Microsoft .NET Web Farms describes the life cycle of Microsoft .NET e-business applications and the steps an organization will take as they grow their online presence.

Detailed descriptions of technology choices an organization makes will save time, effort, and money. In-depth analysis of software technologies used includes Application Center, Network Load Balancing Services (NLBS), Component Load Balancing (CLB), COM+, Firewalls, Cluster Server, useful 3rd party technologies and other key Microsoft .NET components. Finally a hardware roadmap will explore technologies like caching servers, load balancing devices, and others. These hardware and software roadmaps will culminate in a detailed topology of a successful e-business application deployment based on real-world experience.
