The Symbolic Species Evolved (Biosemiotics)

The Symbolic Species Evolved (Biosemiotics)

This anthology is a compilation of the best contributions from Symbolic Species Conferences I, II (which took place in 2006, 2007).

In 1997 the American anthropologist Terrence Deacon published *The Symbolic Species: The Coevolution of Language and the Brain*. The book is widely considered a seminal work in the subject of evolutionary cognition. However, Deacon's book was the first step – further steps have had to be taken. The proposed anthology is such an important associate.

The contributions are written by a wide variety of scholars each with a unique view on evolutionary cognition and the questions raised by Terrence Deacon - emergence in evolution, the origin of language, the semiotic 'missing link', Peirce's semiotics in evolution and biology, biosemiotics, evolutionary cognition, Baldwinian evolution, the neuroscience of linguistic capacities as well as phylogeny of the homo species, primatology, embodied cognition and knowledge types.
