Knowledge Management: Learning from Knowledge Engineering Jay Liebowitz

Knowledge Management (KM) is strongly rooted in the discipline of Knowledge Engineering (KE), which in turn grew partly out of the artificial intelligence field. Despite their close relationship, however, many KM specialists have failed to fully recognize the synergy or acknowledge the power that KE methodologies, techniques, and tools hold for enhancing the state of the art in Knowledge Management.

Knowledge Management: Learning from Knowledge Engineering addresses this vacuum. It gives concise, practical information and insights drawn from the author's many years of experience in the fields of expert systems and Knowledge Management. Based upon research, analyses, and illustrative case studies, this is the first book to integrate the theory and practice of artificial intelligence and expert systems with the current organizational and strategic aspects of Knowledge Management.

The time has come for Knowledge Management professionals to appreciate the synergy between their work and the work of their counterparts in Knowledge Engineering. Knowledge Management: Learning from Knowledge Engineering is the ideal starting point for those in KM to learn from and exploit advances in that field, and thereby advance their own.

The book was published by the very famous author. The author makes some research before write this book. This particular book very easy to read you may get the point easily after scanning this book.

Kirk Qualls:

Within this era which is the greater man or who has ability in doing something more are more precious than other. Do you want to become among it? It is just simple method to have that. What you need to do is just spending your time almost no but quite enough to experience a look at some books. One of the books in the top checklist in your reading list is actually Knowledge Management: Learning from Knowledge Engineering. This book that is certainly qualified as The Hungry Slopes can get you closer in becoming precious person. By looking up and review this publication you can get many advantages.

Reta Zimmer:

As a pupil exactly feel bored for you to reading. If their teacher questioned them to go to the library in order to make summary for some reserve, they are complained. Just small students that has reading's heart or real their pastime. They just do what the teacher want, like asked to go to the library. They go to generally there but nothing reading critically. Any students feel that studying is not important, boring and also can't see colorful pictures on there. Yeah, it is to get complicated. Book is very important in your case. As we know that on this age, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore this Knowledge Management: Learning from Knowledge Engineering can make you feel more interested to read.
